## LIVESTOCK

## Description

The Round Bale Feeder for Horses is both efficient and safe. By using a tubular steel design with no sharp edges, the feeder minimizes the dangers of cuts or serious injuries. The height of the feeder facilitates feeding and eliminates rubbing off the mane of horses.

Because horses naturally paw at their food, the height of our Round Bale Feeder helps protect their legs from possible injury. And since horses are naturally graze animals, what falls out of the feeder during feeding will be eaten first, leaving little waste.

## Features

- It's easily loaded with a front-end loader or pickup truck.
- It offers each horse a private area to feed.
- It provides protection from rain and snow.
- The wire mesh bottom provides air passage for drying.
- It minimizes waste and reduces feeding cycles.
- It saves up to 50% in cost of winter feeding.
- It minimizes spring cleanup of old and wasted hay.
- Most of all, feeding with round bales is 50% cheaper than square bales

*Clean &  
Safe Without  
the Waste!*
