LIVESTOCK

PIG OUT

Sioux Steel introduces a new cart that takes the work out of removing dead livestock from your confinement. The PigOut. The new Load-Assist Cable assembly gives the operator a 2:1 pulling advantage. Hooking up the animal is easy with the built in snare. As you pull, it actually pulls the cart and animal together, practically loading itself. Minimal effort is needed to get the carcass onto the PigOut and out of your building. It's narrow design easily fits down any aisle. The telescoping handle adjusts to fit any operator. The PigOut unique body style also works well for small pigs. The cart can be loaded to capacity with a number of small pigs, saving you many trips up and down the aisle. If you have ever had to drag a large hog any distance, you know how tiring that can be. The PigOut is designed to utilize the principles of balance and leverage to make your work easier. The PigOut will save you time and effort in the unpleasant job of removing a carcass from your building.
