

VFD Fan Control

Variable Frequency • Variable Speed • Solid Savings

Features

The Variable Frequency Drive Fan Control is available for 10hp to 50hp Centrifugal Fans.

The VFD Fan Control offers phase conversion, with a single phase supply equaling a three phase efficiency.

The motor management of the VFD Fan Control is designed for maximum gain. This offers the following benefits:

- Soft start
- Speed control
- Overload management
- Voltage tolerance
- Vibration dampening
- Low temp operation

The VFD Fan Control is extremely energy efficient, remaining over 96% efficient under any load. Custom settings can also be created for even more savings.

Local utility rebates are available on the VFD Fan Control. Rebates can be as much as \$60/hp. With the rebates and energy savings, the VFD Fan Control pays for itself within a year!

The VFD Fan Control can be retrofitted to replace existing controls in order to receive rebates on those units as well.
